### WEEKLY USA GRAIN AND PROTEIN REPORT December 21, 2024

This week's report is the final report for 2024. Our first 2025 report will be issued on January 04.

We hope that everyone has a happy holiday season and that we all can look forward to a healthy, happy and peaceful 2025.

Corn prices in the US didn't change much this – perhaps up by a dollar or two. Soybeans were down in the week by about USD 5 m/t but soymeal prices moved higher by USD 10 m/t. US spring wheat was up by about USD 3 m/t while winter wheat was about USD 6 to 8 m/t lower.

Trade reports say that soybeans, soft red winter wheat and hard red spring wheat all hit new futures contract lows. Only soymeal seemed to have an up week.

Corn was a wee bit firm this week mainly, according to the trade, due to strong export sales and record corn use in the US for ethanol production. Whenever corn prices dip a little there is increased buying interest --- no one is seriously expecting lower corn prices.

US soybeans are having to fight with lower priced Brazil beans for export sales. Futures trading in soybeans was at high levels this week, the highest in weeks.

The main factor for wheat prices this week was production and prices changes in international markets. Russia has reduced its wheat export quota again as it tries to maintain local stocks. Winter wheat planting in Europe has gone very well which could lead to a better crop in 2025. Trade reports say that Brazil is exporting low quality feed wheat and importing higher quality milling wheat.

**Estimated Bulk Grain Freight in USD per m/t, basis heavy grains.**

US Gulf to Europe: Panamax	\$23.00	Steady

DDGS corn, 35 profat, USA FOB NOLA	USD 215 flat to Apr

## SECTION 2 --- FISHMEAL COMMENTS AND PRICES: PERUVIAN “INDICATION” FISHMEAL PRICES:

Total catch in North/Central Peru has reached 1.76 million m/t leaving 752,000 m/t on the quota. Fishmeal production is at about 394,000 m/t with fishoil production at 45,300 m/t. Fishoil yields are increasing and are now at an overall seasonal average of 2.6% although for most of the catch this week the fishoil yield has been higher at about 4.0%.

The fishing quota for the South Region expires on December 31, 2024 with only 41,000 m/t landed on the 251,000 m/t quota. The new 2025 quota should be announced soon.

Trade reports are saying that there looks to be a good chance that December catch will reach 1 million m/t --- not a bad fishing month at all.

The current level of fishmeal export sales is reported to be at about 455,000 m/t. Buyers are looking at slightly lower prices but producers don't seem to be interested in lower price levels. However, lower grade fishmeal prices have dropped a few dollars. New orders from China are reported to have decreased as stocks in China are still high and current shipments from Peru will arrive before the main aqua feed demand period in China.

### European fishmeal prices – FOB North German port.

Type	Protein %	Price per m/t USD
Standard Herring	64% protein	1,600
Danish standard fishmeal	71% protein	2,030
